

Design by CTD - www.ctd-studio.co.uk

ready to use

### Product range

Clayworks' natural, low carbon clay plasters are available as

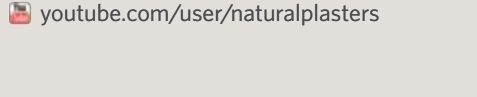

- **Pigmented top coat** plasters in a range of 27 beautiful colours.
- **Pigmented top coat** plasters with mica, also manufactured in a range of 27 colours; use for a beautiful iridescent sheen.
- **Plain top coat** plaster, normally used as a base for painting.
- **Base coat** clay plaster.

All our clay plasters are manufactured in the UK and are supplied in **25kg** and **1 tonne** bags. Clayworks is a family business based in Cornwall.

### Naturals

environmentally friendly

### Technical information

Clayworks plasters are our very own blend of clays and sands. They contain no chemical additives, are 100% non-toxic and 100% biodegradable.

A 25kg bag of plaster will cover approximately 7-8 m<sup>2</sup> at a thickness of 2-3mm.

A one tonne bag will cover approximately 320 m<sup>2</sup>.

Winner Best Eco Product 2012

### Terracottas

professional expertise

### Other things we do

We have been plastering with local clays for over 10 years. This motivated us to produce the first UK made, ready-to-use clay plaster.

As well as manufacturing clay plasters, we offer consultancy, building and plastering services in natural materials, such as clay and lime. We also specialise in earth floors. We work on both historic and new builds. We are always happy to discuss any projects that you may have.

Winner Best Surface Finishes 2012

easy to apply

### Education & training

Join our Clay Plaster Network (CPN): we hold courses for professionals and novices to introduce you to our plasters. Please contact [katy@clay-works.com](mailto:katy@clay-works.com) for details. For all information about clay plasters and plastering, visit [www.clay-works.com](http://www.clay-works.com) where you can see examples of our own projects, download our data and application sheets and follow our clay blog.

Clayworks directors Adam and Katy have also written a book *Using Natural Finishes*, a beautifully illustrated step-by-step guide on clay plaster finishes, as well as lime plasters and paints. This book is available through [www.clay-works.com](http://www.clay-works.com)

### Browns

naturally beautiful pigmented clay plasters

# naturally beautiful

## Inspired by nature

Clayworks' natural, pigmented clay plasters come in an exciting range of pre-mixed, nature-inspired colours. The unique blend of minerals and pigments is designed to bring a piece of the natural environment into the home.

Clayworks manufacture and supply ready-to-use clay plaster systems: Base coats and pigmented top coats. Equally suitable for contemporary interior design and traditional settings, our natural clay plasters provide a healthy, environmentally friendly and beautiful alternative to conventional plasters and paints.

Recipient of HM The Queen's *Pioneers to the Nation* award

## Off Whites

## Where to use them

Clayworks pigmented clay plaster can be used on interior walls and ceilings. They can be applied directly onto most conventional building substrates with the use of a suitable primer (please see Clayworks clay plaster guidance notes). They are suited alike to historic and eco-walling substrates such as cob, lime, hemp, strawbale and breathable walling boards.

Our pigmented clay plasters are through-pigmented, so no need to paint! However, if you'd prefer a colour we don't offer, then choose a micro-porous finish, such as clay paint or limewash.

The carefully blended ingredients give our plasters a unique depth and subtle radiance, which is difficult to achieve with other plasters and paints.

## Blues

# healthy to live in

## Why use them

Clay plasters are naturally beautiful and have been used since ancient times. And if that wasn't enough, they have a host of other benefits too.

Clay plasters are breathable, regulate relative interior humidity and temperature, can neutralise odours and toxins, screen electromagnetic radiation, and are naturally anti-static. This means that clay plasters are positively healthy to live around, as they can contribute to improving air quality. Clay plaster helps you design your healthy, low carbon living space.

Shortlisted *Design Awards* 2012

## Greens

## How to use them

Clayworks pigmented clay plasters are simple to apply.

Similar to conventional plasters, ours are applied with steel trowels, but are finished with a plastic trowel. This finishing action serves to close the grain, making the surface smooth, polished, durable and dust free.

Alternatively, the plaster can be finished with a damp sponge to create a more open-grained, soft, textured finish.

Our clay plasters are versatile to allow individual expression, be that straight-edged and modern, or sensuously curved. Try it for yourself and you will be surprised at their versatility.

Winners, Products and Services, Cornwall Sustainability Awards

## Olives

# the natural choice

## Subtle colours

Part of our clay plaster's natural appeal is the subtle colour variations that are inherent in the material. These produce a vital, alive quality to a room. The final results will depend on whether you choose the Pigmented Top Coat with or without mica, and how you apply and finish the plaster. Application of the Clayworks recommended Protective Wall Glaze will produce a richer colour finish whilst also providing extra protection.

Ambient light also influences the final appearance and this is part of the magic and beauty of living with clay plaster finishes. For this reason please use these colour swatches to give you an impression of what can be achieved and not necessarily as a precise colour match. Samples of natural clay plasters can be requested from [info@clay-works.com](mailto:info@clay-works.com)
